

Thermoacoustic setup

Thermoacoustic simulations

- Obtain modal shapes using FEA with temperature dependent properties:

Rigid Tilt

104/107 Hz

Rigid Tilt

140/139 Hz

Bending

314/273 Hz

Torsion

385/295 Hz

Saddle

747/665 Hz

Higher order

879/690 Hz

215/204 Hz

325/309 Hz

328/312 Hz

484/461 Hz

859/824 Hz

1216/1160 Hz

Validation

- Use Image Decomposition for validation:

Chebyshev Polynomial Kernels:

Residual:

$$u_{resid}^2 = \frac{1}{N} \sum_{i,j} (\hat{I}(i,j) - I(i,i))^2$$

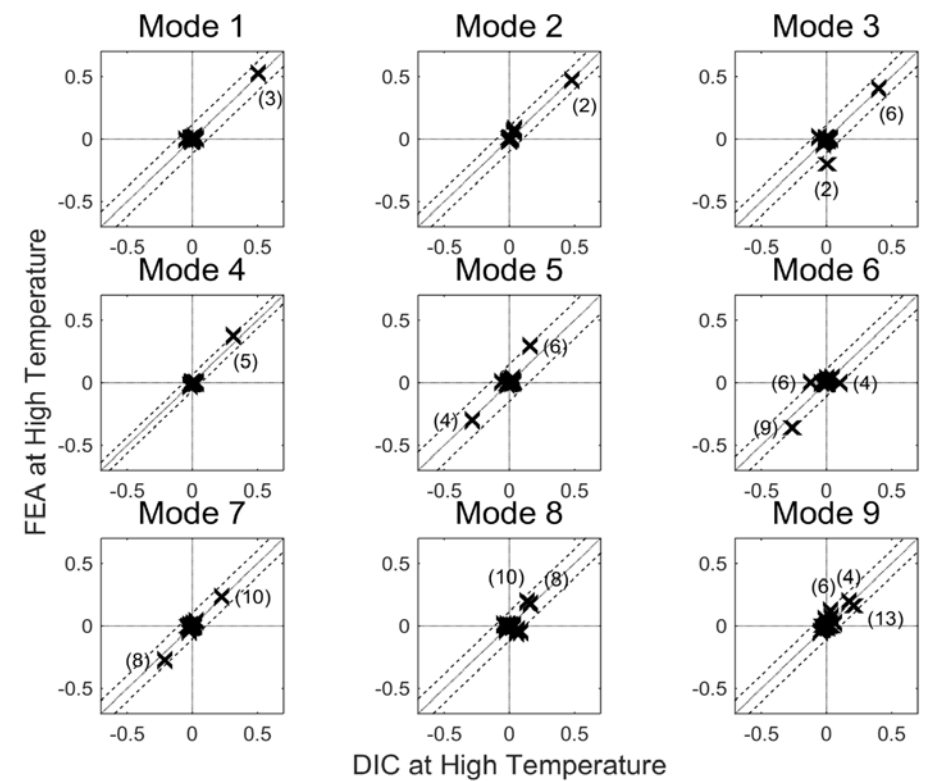

Validation

- FEA-DIC room temperature:

- FEA-DIC high temperature:

Validation

- FEA-DIC room temper

$$u(S_E) = \sqrt{u_{meas}^2 + u_{resid}^2}$$

Mode 3

Thanks!
